

in Japan, Canada, and the EU countries. The US also has critical shortages of PSW. Bangladesh is uniquely set to capture a lion's share of the PSW market worldwide with the favorable Image of Bangladeshi PSWs in the Western World. Bangladesh can double their current remittances with the capture of 10% of the PSW markets. The competition is very low. All that is required is to train them with Spoken English and a 15 days clinical and support activity training. This opportunity will not only stabilize our foreign remittances but also is expected to double the current remittance levels. COVID-19 has increased the markets potential of PSWs around the globe. Bangladesh has put all their eggs into the RMG sector. This is one of the greatest risk factors that will haunt our economy in the post Corona era as the sale of RMG is bound to fall in the coming months. We already have lost billions of dollars in the lost contracts in the RMG sector and this trend is bound to continue putting our economy in a tail spin. Bangladesh needs to make drastic strategic changes in the export oriented manufacturing sectors during the post Corona era. The manufacturing sector needs to diversify with added emphasis on the feeding Industries that add value in the automotive sectors. Bengalis have shown resilience in their skills in the automobile spare parts production. They should now play a key role at the economic recovery in the post COVID era. Feeding Industry alone can change the very architecture of our manufacturing sectors. The Zinzira workshops and the Machine Tools factory should focus on developing the spare parts, seat cushions, seat belts, air bags and other needed accessories of the automobile Industry and go into bulk contracts with the German, American, and Chinese Car makers to provide them with the aforementioned items. This expanded market alone not only will make up for our losses in the RMG

sector but also will bring added revenue.

Finally, the Banking Sector of Bangladesh is going through a critical period with all the default loans and liquidity crunch. This sector is a major threat to the political and financial stability of the country. If the current situations persist, we can expect major social unrests in the post COVID era. The Government needs to step in with some stimulus packages to bailout the Government Banks. The Banking sector should be better regulated with the independent bodies comprising of notable financial experts. There is a need for Paradigm shift in the financial sectors. This shift should start with lowering the interest rates at the banks, attracting Foreign Direct Investments and a greater opportunity to wash up the black money holdings. Government should embark on labor intensive projects to save the day labors and the poor. At the same time, strategies need to be proclaimed clearly so that all workforces ensure preparing themselves as effective as well as efficient at this stage for depreciation-control.

IMPACTS OF VIRTUAL CLASSES:

Perspective- Cantonment Public School & College, Saidpur

Md. Bablu Hossain
Senior Lecturer (English)

What is a Virtual Class?

A Virtual Class is a huge step in education sector. It refers to a non-traditional interactive online class organized by some apps like Zoom, Microsoft Teams etc where tutors and students work together simultaneously.

COVID-19 pandemic & closure of educational institutions of the country:

COVID-19, originated in China, is devastating the world. Spreading its clutches over almost all the countries, the virus has already snatched away the lives of about 15,77,875 (as on 11-12-2020) people throughout the world. Like other countries, the wave of COVID-19 jolted Bangladesh first on 8th March, 2020 when three persons were detected COVID-19 positive. Observing the worsening condition of COVID-19, Bangladesh Government declared the closure of all types of educational institutions of the country to protect the future nation builders.

Launching online virtual classes of CPSCS:

Being segregated from beloved institution, the students started passing monotonous confined life at home. They started to break down inwardly. Respected guardians also got anxious about the deteriorating physical and psychological condition of their children. Our respected far-sighted Principal sir, Lt. Col. Sazzad Hossain, psc, realized the true condition of the students. So, prior to the Government decision of conducting online classes, he played a pioneering role and launched online virtual classes of CPSCS in April, 2020.

Impacts of virtual classes on the teachers:

As per the Government decision, teachers started staying at home being segregated from students and classroom. This was quite unbearable for them. Virtual classes appeared to them as a bless-

ing. Attending virtual classes, they are in rhythm now.

Impacts of virtual classes on the guardians:

The news of closure of the institution came to the guardians as a bolt from the blue. They were at a loss what to do. They were extremely anxious about the academic progress of their children. Virtual class was a solution to this anxiety. Now the guardians are assured that the academic mainstream of their children won't be hampered.

Impacts of virtual classes on the students:

Positive Impacts:

(a) Mobilizing the academic activities:

The academic activities of the students are mobilized by virtual classes. Everyday classes are being taken by the teachers cordially. Home tasks are being checked, different exams are also being taken. Already Home Test-1 & 2, Promotion Test of class XI, Question Banks and Pre-Test of class X have been taken.

(b) Making the students disciplined:

Students have to attend the virtual classes everyday in time. They have to do the home tasks and show them to the teachers. Besides they have to participate in different examinations and submit the answerscripts of question banks in time. All these activities make them disciplined.

(c) Making the students confident by removing depression:

Every week a virtual fun class is arranged by the respective class teachers. In this class, students are told to participate in various re-creational activities like reciting poems, singing songs, making jokes etc. These activities help students remove their depression. They get rectified and confident.

(d) Helping the students communicate:

Virtual classes provide the students with an ample opportunity to share their views, opinions and judgements while engaging in a lively debate with the teacher and classmates. This free sharing

removes confusions and makes them mentally strong.

(e) Saving time for the students:

Our students now attend virtual classes staying at home. They need not go to the institution. This saves their time and money. They can apply this saved time to study more.

(f) Helping the students be safe from Covid-19:

Virtual classes directly or indirectly keep the students busy. They have to attend virtual classes from 10 am to 1.30 pm. Then they have to do the given home tasks. Besides they have to answer the questions given in the question bank. Because of doing all these works, they have to stay at home. Staying at home saves them from being infected with Covid-19.

Negative Impacts:

(a) Lacking face-to-face interaction:

Virtual classes lack direct communication with the teacher. Eye-contact is considered a very important factor but our students are deprived of this opportunity.

(b) Unable to conduct practical classes:

Our students can not attend practical classes

virtually. This barrier hampers their studies of science- related subjects like Chemistry, Physics and Biology.

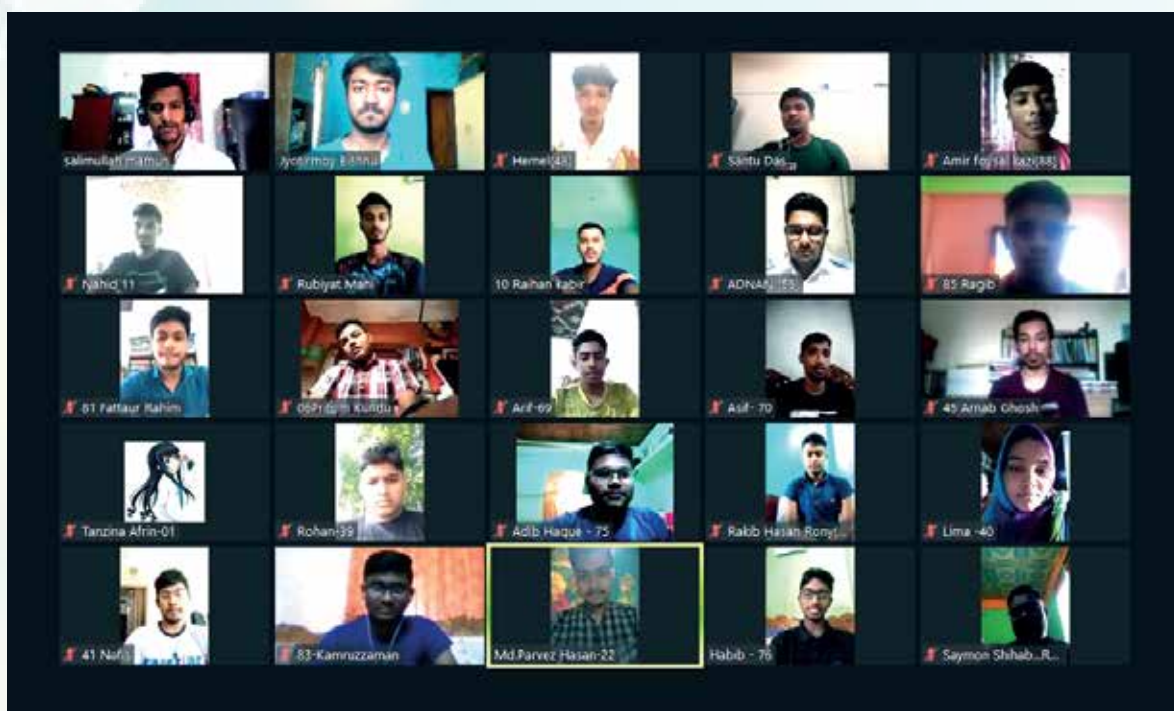

(c) Unable to control the students directly:

A teacher loses his power to control the naughty or indisciplined students directly in a virtual class. Some students of this type, without being motivated by the teacher directly, don't attend virtual classes sometimes.

(d) Unable to help the poor students:

Virtual classes require a PC or a Laptop or a Smart-phone and a strong internet connection. Some of our students of CPSCS (not more than 10%) can't afford these requirements of virtual classes.

In fine, we can say that a virtual class is a long leap from the traditional teaching system. It is the only solution to our teaching problem during this pandemic situation though it has some negative impacts. Our students have already adjusted themselves with this blessing of technology. In sha Allah, our respected Principal Sir will continue these virtual classes till the Government's declaration of re-opening of educational institutions of the country.
